

Alaska Invasives ID

Download it today.

<https://apps.bugwood.org/apps/alaska>

App features:

- Interactive key to identify invasive species
- Pictures and descriptions of invasive species
- Easy reporting that captures your location and allows you to submit photos

Alaska Invasives ID brings the power of EDDMapS to your phone. Now you can use an interactive key to identify invasive species and submit those observations directly from the field. By reporting sightings of invasive species, we can better assess the extent of the infestations and hopefully eradicate new infestations before they become huge problems. The goal of Alaska Invasives ID is to make identification and reporting of invasive species as easy and efficient as possible.
